**BRAIN CANCER TREATMENT REGIMENS (Part 1 of 9)**

**Clinical Trials:** The NCCN recommends cancer patient participation in clinical trials as the gold standard for treatment. Cancer therapy selection, dosing, administration, and the management of related adverse events can be a complex process that should be handled by an experienced healthcare team. Clinicians must choose and verify treatment options based on the individual patient; drug dose modifications and supportive care interventions should be administered accordingly. The cancer treatment regimens below may include both U.S. Food and Drug Administration-approved and unapproved indications/regimens. These regimens are only provided to supplement the latest treatment strategies. These Guidelines are a work in progress that may be refined as often as new significant data becomes available. The NCCN Guidelines® are a consensus statement of its authors regarding their views of currently accepted approaches to treatment. Any clinician seeking to apply or consult any NCCN Guidelines® is expected to use independent medical judgment in the context of individual clinical circumstances to determine any patient's care or treatment. The National Comprehensive Cancer Network makes no warranties of any kind whatsoever regarding their content, use, or application and disclaims any responsibility for their application or use in any way.

**Systemic Therapy for Adult Low-Grade Infiltrative Supratentorial Astrocytoma/Oligodendroglioma**

**Note:** All recommendations are Category 2A unless otherwise indicated.

### Systemic Therapy for Anaplastic Gliomas

#### Recurrence/Salvage Therapy

**REGIMEN**

**DOSING**

#### Temozolomide

Temozolomide 50mg/m\(^2\) daily for up to 1 year or until disease progression.

**OR**

For children/adolescents: Temozolomide monthly 5-day courses at doses of 200mg/m\(^2\)/day (patients with no prior CSI) or 180mg/m\(^2\)/day (prior CSI).

**OR**

Days 1–5: Temozolomide 150mg/m\(^2\) to 200mg/m\(^2\) 5 days of each 28-day cycle; when patients progress during conventional temozolomide treatment, change temozolomide to a 50mg/m\(^2\) daily regimen.

To days 1–5: Temozolomide 150mg/m\(^2\) to 200mg/m\(^2\).

Repeat cycle every 28 days.

#### Lomustine or carmustine

**Day 1:** Lomustine 100–130mg/m\(^2\)/day orally.

Repeat cycle every 6 weeks.

#### Combination PCV regimens (Lomustine + procarbazine + vincristine)

**Day 1:** Lomustine 110mg/m\(^2\) orally

**Days 8–21:** Procarbazine 60mg/m\(^2\) orally daily

**Days 8 and 29:** Vincristine 1.4mg/m\(^2\) (maximum 2mg) IV.

Repeat every 6 weeks.

#### Bevacizumab

**Day 1:** Bevacizumab 10mg/kg IV.

Repeat cycle every 14 days.

#### Bevacizumab + irinotecan

**Day 1:** Bevacizumab 10mg/kg IV plus irinotecan 125mg/m\(^2\).

Repeat cycle every 2 weeks.

**OR**

Bevacizumab 10mg/m\(^2\) IV plus irinotecan 340mg/m\(^2\) IV in patients receiving enzyme-inducing antiepileptic drugs (EIAED).

Repeat cycle every 14 days.

#### Bevacizumab + nitrosurea

**Days 1 and 15:** Bevacizumab 10mg/kg IV

**Days 1 and 8:** Fotemustine 75mg/m\(^2\) IV

Followed after a 3-week interval by a maintenance phase of bevacizumab 10mg/kg IV plus fotemustine 75mg/m\(^2\) IV.

Repeat cycle every 3 weeks.

#### Bevacizumab + carboplatin

**Day 1:** Bevacizumab 10mg/kg IV plus carboplatin AUC 4–6mg·min/mL, depending on the patient's prior treatment history and bone marrow reserves; cycle 2 doses of carboplatin (every 28 days) and 3 doses of bevacizumab (every 14 days) and lasted 6 weeks.

#### Irinotecan

**Day 1:** Irinotecan 350mg/m\(^2\) IV to patients on non-enzyme-inducing antiepileptic drugs (NEIAED) or 600mg/m\(^2\) to patients on EIAED.

Repeat cycle every 21 days.

**OR**

**Day 1:** Irinotecan 350mg/m\(^2\) IV.

Repeat cycle every 21 days.

#### Platinum-based regimen: Carboplatin

**Day 1:** Carboplatin 350mg/m\(^2\).

**Days 1–3:** Teniposide 50mg/m\(^2\).

Repeat cycle every 4 weeks.

#### Platinum-based regimen: Carboplatin

Carboplatin 560mg/m\(^2\) IV at 4-week intervals; continued until disease progression, unacceptable toxicity, or for 12 additional courses after achieving maximal response.

#### Platinum-based regimen: Cisplatin

**Days 1–3:** Cisplatin 25mg/m\(^2\)/day IV + etoposide 100mg/m\(^2\)/day IV.

Repeat cycle every 4 weeks for first 3 cycles, then repeat every 5 weeks for next 3 cycles, then repeat every 6 weeks for the last 3 cycles; total 10 cycles over approximately 10–11 months (total dose 750mg/m\(^2\) cisplatin and 3,000mg/m\(^2\) etoposide).

#### Cyclophosphamide

**Days 1–2:** Cyclophosphamide 750mg/m\(^2\) IV.

Repeat cycle every 28 days.

#### Etoposide

Etoposide 50mg/day given until the neutrophil count dropped to < 1.0 x 109/L or the platelets fell to < 75 x 109/L and resumed when the counts rose to normal levels.

*continued*

### Systemic Therapy for Adult Medulloblastoma and Supratentorial Primitive Neuroectodermal Tumor (PNET)

#### Adjuvant Treatment

Weekly vincristine during craniospinal radiation therapy followed by either of the following regimens. Note that omission of vincristine during radiation therapy phase of therapy or dose modification may be required for adults because they do not tolerate this regimen as well. Data supporting the use of vincristine has been found in pediatric trials only. Patients should be closely monitored for neurologic toxicity with periodic exams.

| Vincristine + cisplatin + lomustine³⁵ | During craniospinal radiotherapy (RT) Day 1: Lomustine 75mg/m²² orally<br>Day 2: Cisplatin 75mg/m²² IV<br>Days 2, 8 and 15: Vincristine 1.5mg/m²² IV bolus, max 2mg bolus; up to max 8 doses. |
| Vincristine + cisplatin + cyclophosphamide³⁶ | Day 1: Cisplatin 75mg/m²² IV<br>Days 2, 8 and 15: Vincristine 1.5mg/m²² IV bolus, max 2mg bolus<br>Days 22, 23: Cyclophosphamide 1,000mg/m²² IV. |

#### Recurrence/Salvage Therapy

No prior chemotherapy: Consider high-dose chemotherapy with autologous stem cell reinfusion in patients who achieve a complete remission with conventional doses of salvage chemotherapy or have no residual disease after re-resection.³⁵

| Carboplatin + thiopeta + etoposide³⁶ | Days −8 to −6: Carboplatin AUC 7mg · min/mL IV, maximum 500mg/m²²/day<br>Days −5 to −3: Thiopeta 300mg/m²²/day IV plus etoposide 250mg/m²²/day I<br>Day 0: Autologous stem cell rescue (ASCR). |
| Temozolomide³                  | For children/adolescents: Temozolomide monthly 5-day courses at doses of 200mg/m²²/day (patients with no prior CSI) or 180mg/m²²/day (prior CSI). |
| Oral etoposide¹⁷,³⁸           | Days 1–21: Etoposide 50mg daily. Repeat cycle every 4 weeks.                                |

### Meningioma

- **Interferon-alfa** α-IFN 106 units/m² SC every other day for 4 weeks. Repeat cycle every 4 weeks.
- **Somatostatin analog** Sandostatin LAR Depot 10–30mg IM every 4 weeks.

### Systemic Therapy for Limited (1–3) Metastatic or Multiple (>3) Metastatic Lesions

*Recurrent disease—Treatment as per the regimens of the primary tumor († Bevacizumab + chemotherapy can be considered for patients who have failed monotherapy with bevacizumab)*

- **Carmustine wafer** 8 wafers (7.7mg) for a total of 61.6mg implanted intracranially.
- **High-dose methotrexate (MTX; breast and lymphoma)** Breast: MTX 3.5g/m² IV. Lymphoma: Treatment based on weekly high-dose MTX 3.5g/m² and weekly intra-CSF cytarabine; oral procarbazine 100mg/m² days 2–15 was added to patients whose bone marrow reserve could tolerate this drug.
- **Capecitabine ± lapatinib, cisplatin, etoposide** Days 1–14: lapatinib 1,250mg orally plus capecitabine 1,000mg/m² orally twice per day. Repeat cycle every 21 days. OR Days 1–14: Capecitabine 2,000mg/m²/day in 2 divided doses for 14 days, followed by a 7-day rest and lapatinib 1,250mg once daily continuously. OR Day 1: Cisplatin 100mg/m² IV Days 4, 6, and 8: Etoposide 100mg/m². Repeat cycle every 21 days. OR Day 1: Cisplatin 100mg/m² IV Days 1, 3, and 5 OR Days 4, 6, and 8: Etoposide 100mg/m² IV. Repeat cycle every 21 days. OR (breast) Capecitabine orally starting at a dose of 1,800mg/m²/day (up to 2,000mg/m²/day) in 2 divided doses, and temozolomide given orally once daily at a starting dose of 75mg/m²/day. Concomitant daily doses given on days 1–5 and days 8–12, with cycles repeated every 21 days until disease progression. OR (breast) Days 1–14: Capecitabine 2,000mg/m²/day orally once daily. Repeat cycle every 21 days. OR (breast) Days 1–21: Capecitabine 2,400mg/m²/day orally once daily. Repeat cycle every 28 days.

- **Ipilimumab (melanoma)** Day 1: Ipilimumab 10mg/kg IV. Repeat cycle every 21 days for a maximum 4 cycles. Individuals who were clinically stable at week 24 were eligible to receive ipilimumab 10mg/kg every 12 weeks.
- **BRAF inhibitors (melanoma): Dabrafenib** Dabrafenib 150mg orally twice daily.
- **BRAF inhibitors (melanoma): Vemurafenib** Vemurafenib 960mg orally twice daily.

*continued*
### Systemic Therapy for Leptomeningeal Metastases

**Organ-specific Systemic Chemotherapy; Emphasizing Drugs with Good CNS Penetration**

<table>
<thead>
<tr>
<th>REGIMEN</th>
<th>DOSING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Intra-CSF chemotherapy: Liposomal (slow-release) cytarabine (lymphoma/leukemias)</strong></td>
<td><strong>Induction</strong> Liposomal cytarabine 50mg intrathecally once every 14 days for 2 doses. <strong>Maintenance</strong> Liposomal cytarabine 50mg every 14 days for 2 doses, followed by 50mg every 28 days for 2 doses. <strong>OR Induction</strong> Liposomal cytarabine 50mg intraventricularly every 14 days for 3 doses plus rituximab 25mg intraventricularly twice per week for 8 doses. <strong>Maintenance</strong> Liposomal cytarabine 50mg intraventricularly once weekly plus rituximab 25mg intraventricularly twice weekly for 4 weeks. Repeat cycle every 4 weeks until disease progression</td>
</tr>
<tr>
<td><strong>Intra-CSF chemotherapy: topotecan</strong></td>
<td>Topotecan 400 μg intraventricularly twice weekly for 6 weeks.</td>
</tr>
<tr>
<td><strong>Intra-CSF chemotherapy: etoposide</strong></td>
<td><strong>Induction</strong> Days 1–5: Etoposide 0.5mg/day intra-CSF every other week for 8 weeks. <strong>Maintenance</strong> Days 1–5: Etoposide 0.5mg/day every 4 weeks.</td>
</tr>
<tr>
<td><strong>Intra-CSF chemotherapy: trastuzumab</strong></td>
<td>Cumulative dose of intrathecal trastuzumab given in clinical studies was 1,040mg (SD 697.9, median 1,215, range 55–1,675)</td>
</tr>
<tr>
<td><strong>Intra-CSF chemotherapy: Interferon-alfa (category 2B)</strong></td>
<td>IFN-α 1 x 106 IU subcutaneously every other day 3 times per week for 4 weeks by induction.</td>
</tr>
<tr>
<td><strong>High-dose methotrexate for lymphoma and breast</strong></td>
<td>Breast: MTX 3.5g/m² IV.</td>
</tr>
<tr>
<td><strong>Erlotinib (Category 2B)</strong></td>
<td>Weekly pulse erlotinib for EGFR exon 19 or exon 21 L858R mutation non-small cell lung cancer; trial demonstrates that a new schedule of erlotinib administration may overcome acquired resistance to erlotinib. Pulsatile high-dose erlotinib was found to be effective against brain metastases in patients who had progressed while on treatment with standard-dose erlotinib. Pulsatile high-dose erlotinib 1,500mg (median dose with range of 900–1,500mg) once weekly.</td>
</tr>

### Systemic Therapy for Metastatic Spine Tumors

- Use regimen for disease specific site
- * For patients not previously treated
- † Patients who have good performance status but evidence of radiographic progression may benefit from continuation of bevacizumab to prevent rapid neurologic deterioration
- ‡ Bevacizumab + chemotherapy can be considered for patients who have failed monotherapy with bevacizumab
